Canisius High School New Athletic Center and Academic Expansion Buffalo, New York

L F Engineering provided the structural design at Canisius High School for their new state-of-the-art athletic center and expanded math and science wing. The field house, pictured above, is approximately 27,000 square feet and includes a full size basketball court with stadium seating and spectator mezzanine. The math and science wing expansion, pictured side and below, is approximately 26,000 square feet. The classroom addition consists of three floors and a basement to allow for food service expansion.

L F Engineering worked closely with other members of the design team throughout the design phase and during construction. The project was completed in the fall of 2009 with a cost of approximately 14 million dollars.
